

Mix essential oils first then add the V-6 and apply to the ring worm.
I have used this on my children and it cleared up the ring worm.

The below information was taken out of the New EODR book on how to take care of animals.

For ticks and fleas:

Animal Scents Shampoo which is currently out of stock but you can add the oils to any natural pet shampoo!! Lemongrass, Lavender, spikenard and geranium would be great!!

This shampoo is designed to clean all types of animal fur and hair. It has insect-repelling and killing properties and is designed to rid hair of lice, ticks, and other insects. You may want to add more lemongrass to the shampoo when washing your animals.

Oils repel fleas and other external parasites. Wash blankets with oils added to the wash during the rinse cycle. Also, place 1-2 drops of lemongrass on the collar to help eliminate fleas. Purification also repels ticks.

For more testimonies on ticks read below the info taken out of the EDR.

To Remove Ticks:

Apply 1 drop cinnamon or peppermint on a cotton swab and swab on tick.
Then wait for it to release the head before removing from animal's skin. I have used oregano, 1 drop on a tick and it backed out of there so fast that you thought that it was hit with a hot poker and then it died.

How Should I Use the Oils on My Animals:

Most animals are more sensitive to the effects of essential oil. They often seem to have a natural affinity to the healing influence of the oils. Adjust the proportionately, based on body weight. If the protocol for a human being (at about 160 lbs) calls for 3-5 drops, then a horse (at 1600 lbs or more) could use as much as 10 times that amount, while a dog (at 16 lbs) would use as little as one tenth that amount. Generally speaking, if you have never put oils on an animal before, you should start carefully, applying them only to the feet, paws, or hooves (on the frog and cornet bands at first.)

In case of cats and small dogs, essential oils should ALWAYS be diluted before applying, because they are actually MORE sensitive to the biochemical's in the oils than humans. Be careful to avoid high phenol oils, such as oregano and thyme, on cats because they can be extremely sensitive to these stronger oils. They should only be used in high rates of dilution (90%) and the diluted oils should only be applied to the paws.

Use Special Caution with Cats

Cats metabolize things very differently from dogs and other animals. Certain oils are potentially toxic to cats and could result in injury or even death, if applied incorrectly. For example, cats generally have adverse reactions to citrus products, and citrus oils are sometimes used to deter cats from frequenting an area. Also, cats are very sensitive to strong odors. A safe alternative, when in doubt, would be to mist them lightly with floral water.

****Consulting with a veterinarian is a good policy before applying oils to cats for the first time.

General Guidelines:

For small animals: (cats and small dogs) Apply 3-5 drops DILUTED (80-90%) oil mixture per application.

For Larger animals: (large dogs) Apply 3-5 drops NEAT per application.

For large Animals: (cattle and horses) Apply 20-30 droops NEAT per application.

How to Administer EOs Internally:Where to Apply Essential Oils to Animals:

For non-ungulate animals (not having hooves) such as dogs and cats, oils (neat or diluted) can be applied to paws for faster absorption.

For hoofed animals, sprinkle a few drops on the spine or flanks and massage then in, also apply on the gums, tongue or underneath the lip; also apply on the frog and cornet bands of hooves. These are for oils to be applied to cows, horses, etc., all animals with hooves. Oils can also be applied to auricular points of the ears.

When the Animal is Jittery and Resists:

If you have a high-spirited, jittery animal that won't be still to receive the application, apply Peace & Calming and / or Valor on yourself first. As you approach the animal, it will react as it perceives the aroma. Kneel down or squat beside the animal and remain still for several minutes, so that it can become accustomed to the smell. As the animal breathes in the fragrances, it will become calmer and easier to manage. You won't have to set on them.

Essential Oils First Aid Kit for Animals:

Animal Scents Ointment it is designed to cover and seal infected wounds and seal in essential oils.

Exodus II for infection, inflammation; to promote tissue regeneration.

Helichrysum as a topical anesthetic.

Idaho Tansy is one of the most versatile oils for animals. It is purifying, cleansing, tissue-regenerating, anti-inflammatory, and anesthetic, and is used for bruised bones, cuts, wounds, and coli. It repels flies.

Lavender for tissue regeneration, desensitizing wound.

Melrose for disinfecting and cleaning wounds, eye infection.

Mountain Savory for reducing inflammation.

Myrrh for infection, inflammation; to promote tissue regeneration.

Ortho Ease to dilute essential oils with and act as a pain-reliever and anti-inflammatory.

PanAway If the pain originates from a broken bone rather than an open wound, use PanAway to kill pain in points where there is no open, raw tissue.

NOTE: Do not apply PanAway to open wounds because it will sting and traumatize the animal. Instead use helichrysum and balsam fir to reduce bleeding and pain.

Purification is more effective than using iodine or hydrogen peroxide for washing and cleansing wounds. It repels ticks and mites.

Roman Chamomile for tissue regeneration, desensitizing wound.

Thieves for inflammation, infection and bacteria; for proud flesh (where new tissue continues to rebuild itself causing excessive granulation) to promote tissue regeneration.

Valerian can be used internally and externally for controlling pain.

Vetiver can be used internally and externally for controlling pain.

Good Luck with your animals. Nancy Sanderson

For internal use (ingestion), essential oils can be put into a capsule and mixed with the feed.

On large animals, the animal's bottom lip can be pulled out and (for example, in case of a horse) 10-15 drops of oils put in. The animal will feel the effect quickly because capillaries in the lip will carry the oil into the blood stream immediately. For a large dog 1-3 drops is sufficient.

When treating animals with essential oils internally, make certain the oils used are PURE and Free of chemicals, solvents, and adulterants. Always seek the advice of a qualified veterinarian before allowing the animals to ingest essential oils.

Other Helpful Tips:

When treating large animals for viral or bacterial infections, arthritis, or bone injury, generally use the same oils and protocol recommended for humans.

For applying to large open wounds or hard-to-reach areas, it helps to put the oils in a spray bottle and spray them directly on location.

After an oil application to an open wound, cover the wound with Animal Scents Ointment to seal it and protect it from further infections. The ointment will also prevent the essential oils from evaporating into the air.

There is no right or wrong way to apply essential oils. Every animal is a little different. Use common sense and good judgment as you experiment with different methods. Observe carefully how the animal responds to the treatment.

Take special care not to get essential oils in the animals eyes.

Make sure the animal is drinking pure water. Chlorinated water will suppress thyroid and immune function in animals even quicker than in humans, and when that happens, you will suppress the healing process of that animal whether it is a dog, a horse or a cat.

Quality protein is vitally important to promote healing, which makes the use of organic feed essential. Unfortunately many commercial feed contain bovine by products that have high risk for BSE disease and make them unfit for animal care. Avoid these at all costs. Enzymes are also essential to maximize digestion and protein assimilation.

Discover nature's way of helping you AND your pet!!

The Essential 7 kit - Perfect for use with pets and people!! A variety of single and blended essential oils for daily use. Conveniently packaged for those on-the-go. The Essential 7 kit was created so that anyone could immediately use and appreciate the benefits of therapeutic-grade essential oils. These oils may be used as dietary supplements, diffused, added to bathwater, applied on location, sprayed on your pet, or used with body massage. Refer to the individual oils for specific benefits and instructions.

The kit contains three single oils: Lavender (*Lavandula Augustifolia*), Lemon (*Citrus limon*), Peppermint (*Mentha piperita*), and four blends: Purification, Joy, Peace & Calming, and PanAway.

Essential 7 (5 ml.) bottles Code: #3120 Retail \$91.78 Wholesale \$69.75

Active Ingredients:

Lavender is the most versatile of all essential oils and has been highly regarded as soothing to the skin. The French scientist René Gattefossé was the first to discover these properties when he severely burned his arm in a laboratory accident. It can be used to cleanse cuts, bruises, scrapes, and skin irritations, including hot spots. Lavender has also been studied for its relaxing effects, both physically and emotionally. Helpful for puppies to sleep all night. Or if they get to wild, Put on all paws. (My husband, Blaine and a friend of his went on a camp trip and

your Golden Retriever, Happy went with them. It was a 11 day trip and by the time they came out the second to the last day, Happy could hardly walk because her feet hurt her so bad. Blaine applies Lavender on all her pads that night and the next morning it was like she had never had any problems at all. Frost bite from the snow apply lavender to paws.)

Lemon helps support the immune system, according to Jean Valnet, M.D. It can serve as an insect or flea repellent and may be beneficial for the skin. Add a few drops to distilled water and spritz on your pet for a refreshing lift after an active day. Brain function is enhanced 32% by smelling Lemon Oil; 62% by diffusing it. (This is great to apply to the collar as flea or mosquitoes do not like lemon nor do they like lemongrass.)

Peppermint is soothing to the digestive system. Jean Valnet, M.D. studied peppermint's ability to affect the liver and respiration. Scientists have also researched peppermint's role in affecting impaired taste and smell and mental accuracy when inhaled. Useful for digestive upset and to enhance your pet's appetite. Put a few drops in a spritzer with water and spray in mouth to get rid of doggie breath. (I have spritzed my animals with peppermint water to keep mosquitoes away.)

Joy is an exotic blend of lemon (*Citrus limon*), ylang ylang (*Cananga odorata*), bergamot (*Citrus bergamia*), mandarin (*Citrus reticulata*), rose (*Rosa damascena*), and other essential oils that produces an uplifting magnetic energy bringing joy to the heart. When diffused, it can be refreshing and uplifting.

PanAway was created by Gary Young as a result of an injury in which he severely tore the ligament in his leg. This blend contains wintergreen (*Gaultheria procumbens*), which has an active principle similar to cortisone; clove (*Syzygium aromaticum*), which contains eugenol, a constituent used by dentists to numb gums; peppermint (*Mentha piperita*), calming for nerves; and helichrysum (*Helichrysum italicum*), soothing to localized discomfort. (I have applied it to Happy for her hip problems and it takes the pain right away.) Also bruising like what happened to this dog!!!

Peace & Calming is a gentle, fragrant blend especially designed for diffusing. Its components [orange (*Citrus sinensis*), tangerine (*Citrus nobilis*), ylang ylang (*Cananga odorata*), patchouly (*Pogostemon cablin*), and blue tansy (*Tanacetum annuum*)] promote relaxation and a deep sense of peace. When massaged on the pads of your pet's feet, it can be a wonderful prelude to a peaceful night's rest. Peace & Calming may be especially calming and comforting to your pet during an overactive, stressful day. (I had a dog racer from Alaska stay at our guest ranch during the dog race and had a dog that was really nervous around crowds. I gave him Peace & Calming to apply to her ears and back of neck. Plus some of the dogs had sore pads from all the running. There I gave him Melrose to put on the open sores on the pads. When the race was over he came to me and thanked me for the help as all his dogs pads didn't bleed and hurt them the next day and the dog that was nervous didn't have any problems.)

Purification is a blend of purifying essential oils, such as citronella (*Cymbopogon nardus*), myrtle (*Myrtus communis*), lemongrass (*Cymbopogon flexuosus*), and melaleuca (*Melaleuca alternifolia*). When diffused, it can neutralize mildew, disagreeable pet odors and help cleanse the air. When applied directly to the skin, Purification can be excellent for soothing insect, flea or tick bites and for cleansing cuts and scrapes. (I use Purification or Melrose just one drop on finger, rub finger and thumb together so there isn't so much oil and then apply under kitten's eye when they have eye infection.)

Above all don't forget to do the RDT on your animals, they love it.
Read what others have said:

"I noticed we have not had a flea problem since we have been diffusing Purification on a regular basis. We used to have to put that stuff we got from the vet on behind the dogs neck every year. We have not done that in 2 years. This was just a by product of our quest for better family health." - David Langdon

"I discovered over the holiday weekend that Peace and Calming also works wonders for dogs that get frightened by fireworks. I have a dog that just freaks out. She normally cannot be consoled or controlled, she literally will claw the skin right off of whoever is trying to hold her. Well, doused with Peace and Calming on the pads of her paws and inside her earflap, and down the middle of her muzzle, she slept like a baby and didn't show the least concern. This is truly a blessing for an animal, and much better than trying to tranquilize them. I applaud the groomers, vets, and kennels that are thoughtful enough to P&C. Wouldn't it be wonderful if more of the pet industry caught on to Peace and Calming? Peace and Blessings," - Nancy

"My 62 pound dog has hip dysplasia and we give her 1/2 tsp. of the powdered Sulfurzyme every morning and again every evening and it has really been helpful for her. We just put it on top of her dry food in the morning and then put a tsp. of safflower oil for her coat on top and stir into the dried food. In the evening we give her a large Tablespoon of canned dog food in with the dried food and the Sulfurzyme mixes very easily into that." - Debby Cason

The Golden Touch 1 Kit oils are Great for pets, too!

Natural Pet Care with Essential Oils

The therapeutic benefits of essential oils are meant for every member of the family, including pets. Whether your best friend is in need of a bath, a mood boost, or suffering from minor skin irritation, Young Living has a pet-friendly solution.

Young Living's Most Popular Products for Pets

AnimalScents™ Shampoo: Cleans, conditions, and protects your pet's coat without harmful ingredients.

AnimalScents™ Ointment: A protective and soothing salve formulated for external use on animals.

Did You Know: Essential Oils Pet Care Kit

Veterinarian Dr. Mary Hess of Madison, Wisconsin, recommends that every pet owner carry an essential oil care kit for pets. Based on her experience as a veterinarian, Dr. Hess suggests these Young Living essential oil blends to keep pets feeling their best.

Peace & Calming® essential oil blend: Ideal for stress, fear, anxiety, and similar conditions, Peace & Calming blend can help calm your pet. If the pet is injured, Peace & Calming blend can relax the animal enough to administer other treatments. It can also be used on cats that are resistant to other forms of treatment for urinary problems or that excessively groom themselves.

Purification® essential oil blend: Useful for external parasites, such as fleas, ticks, and mosquitoes.

Thieves® essential oil blend: Perfect for minor wounds, abrasions, and lacerations, Thieves blend can also be used for dental concerns. It is safe for kittens and puppies.

Melrose™ essential oil blend: Used in conjunction with R.C. and Raven blends, Melrose blend provides respiratory support and can also be used on minor wounds, abrasions, and lacerations if Thieves blend can't be tolerated.

R.C.™ essential oil blend: Ideal for respiratory and urinary tract support, R.C blend is practical for cats that require bladder fortification, when conventional therapies fail. (It can be paired with Raven blend for added support.)

Raven™ essential oil blend: Used for respiratory and urinary tract support, Raven blend is more powerful than R.C. blend and features essential oils not found in the latter. Combined, the two oils are highly effective.

Di-Gize™ essential oil blend: Gastrointestinal systems respond well to this blend. Nutmeg and ginger can be added for additional support.

PanAway® essential oil blend: Valuable for relieving discomfort and relaxing the muscles, ligaments, and tendons. This oil blend can be used alone or in addition to other essential oils that aid in general discomfort. Using a moist towel over the area increases the effectiveness of the oils.

Relieve It™ essential oil blend: Especially beneficial for relieving discomfort, Relieve It blend can be alternated with PanAway blend.

NATURAL PET CARE!! WITH YOUNG LIVING ESSENTIAL OILS

Bug Free Natural flea, tick mosquito deterrent.

Make a spray to keep your dog free from mosquitoes, fleas, ticks, and any other kind of pest that might bug your dog!

* Include in your spray the essential of myrrh, cedarwood, cassia, hyssop, rosemary and lemongrass.

Natural calming spray for those anxiety, stressful times our dogs sometimes experience. Make a spray to help keep your dog calm in those sometimes stressful situations such as visits to the veterinarian, bath time, nail trims, during fireworks or thunderstorms – whatever gets your dog a bit “freaked”.

* Include in your spray the essential oils of cistus (Rose of Sharon), cedarwood, cypress, frankincense, myrrh, galbanum, and spikenard.

For soothing itchy, irritated, hotspot skin.

Make a spray to help soothe irritated, itchy, hot spot skin. YL ClaraDerm spray works great for hotspots.

* Include in your spray the essential oils of frankincense, myrrh, sandalwood, cedarwood, myrtle, cypress, hyssop, galbanum, spikenard, and rosewood (NA).

Young Living Blends that work well with dogs for a variety of issues:

Peace & Calming, RutaVaLa, Grounding, Valor or Trauma Life for dogs with noise phobias (thunderstorms, fireworks, and other noise phobias), fear, anxiety, travel woes, and aggression issues.

Valor, Peace & Calming, and Joy for show dogs and breeding dogs, and for use with an established dog in the household when introducing a new dog into the family.

Balsam Fir, Idaho (*Abies balsamea*) This oil seems to be one animals naturally gravitate to of their own accord. I like using it for any type of muscle soreness. It is a great addition to helping arthritis or rheumatic pain. Asthma, respiratory and skin ailments all go together hand-in-hand or paw-in-paw, so keep that in mind as you seek to assist your pet holistically as the whole dog he or she is.

Basil (*Ocimum basilicum*) this is one of my favorite oils as it is so versatile and has many uses - plus it's great for cooking our human food too! It is another of the main oils in the raindrop technique. Basil can help as a muscle relaxant, and with inflammation in addition to being a natural antibiotic/anti-viral.

Cardamom (*Elettaria cardamomum*) A great natural spicy source for canine odors.

Cedarwood, Atlas (*Cedrus atlantica*) Great for canine skin rashes, freshens coat and skin, deodorizes and is good as an insect deterrent.

Chamomile, German (*Matricaria recutita*) Can be helpful for dogs that have arthritis (through massage), cuts, dermatitis, inflamed skin, insect bites, sores, strains, stress, wounds, pain, sensitive skin.

Chamomile, Roman (*Chamaemelum nobile*) Can be helpful for muscle pain on working dogs, puppy teething pain, great for burns, wounds, inflammation, allergic reactions, dry itchy skin, dermatitis, hypersensitive skin. Great for canine massage! I also like adding a drop or two to my calming spray as it assists in calming.

Cistus (*Cistus ladanifer*) - also known as Rock Rose - this is one of my favorite oils and it is in two of our aromatherapy sprays. It has long been studied for its effect on cell regeneration. It can help be helpful in calming your dog. It has a very strong aroma so it's best to use diluted. At the same time that it is calming to nerves it can also be simultaneously uplifting.

Clary Sage (*Salvia sclarea*) Can be helpful for dogs that are nervous and stressed (move, car rides, during show, thunder storms, vet visit). A great blend by Young Living is Peace & Calming and also Grounding that can help with these tense, nervous situations also.

Clove (*Syzygium aromaticum*) What a wonderful, all-purpose oil, a staple in our home. It has a numbing/analgesic effect while disinfecting. It can assist with arthritis, infections, and parasites.

Coriander (*Coriandrum sativum*) A great natural reviving source for canine odors.

Cypress (*Cupressus sempervirens*) Can be good for wounds. Is another of the raindrop technique oils. Can improve circulation.

Eucalyptus (*Eucalyptus globulus*) Can be used for canine wounds, inflammations, cuts, muscle aches and may relieve some pain, can repel insects. I like using the blend, R.C by Young Living as it has ALL of the eucalyptus oils along with myrtle (which is also great at supporting the respiratory system), pine, spruce, marjoram, and lavender.

Frankincense (*Boswellia carteri*) Good for anxious dogs and puppies, may help with minor wounds, sores, bug bites. A rare scent. (Used in two of our aromatherapy sprays). This is my favorite for using on fatty tumors.

Galbanum (*Ferula gummosa*) Used in two of our sprays it is balancing, and also rises dramatically in frequency when used with frankincense or sandalwood. It assists with digestive and skin issues. Because it has analgesic properties it can be helpful in assisting with arthritis or other canine pain issues.

Geranium (*Pelargonium graveolens*) A great insect repellent - great against ticks!

Ginger (*Zingiber officinale*) This oil is found in Di-Gize by Young Living which is another of my favorite blends to use with dogs. It can assist with car sickness, as a digestive aid, arthritis, and respiratory issues.

Grapefruit(*Citrus x paradisi*) May help canine coat and skin care, great for smelly oily coats and has a quite happy aroma. Can help as support for depression, obesity, liver disorders, anxiety, and tumor growth.

Helichrysum (*Helichrysum italicum*) Seems to help heal most paw cuts, hot spots, canine dermatitis, irritated dog skin, and minor wounds. It can also regenerate nerves and chelate out toxins and chemicals from the liver. This oil is also found in Panaway blend by Young Living among others.

Hyssop (*H. officinalis*) Can be great for dog skin problems. We use it for paw sores and canine hot spots. It is another of the essential oil ingredients in two of our sprays.

Jasmine Absolute (*Jasminum officinale*) Can be calming and uplifting, and assist with skin issues.

Juniper (*Juniperus osteosperma* and/or *J. scopulorum*) Seems to work on dogs with oily fur, dandruff and eczema. It can be useful in a variety of skin conditions, liver and bladder problems.

Lavender (*Lavandula angustifolia*) May help dogs with skin allergies. Can be used for paw cuts, canine dermatitis, insect bites, bruises, itching, teeth cleaning, sores, as a great bug deterrent. Excellent for soothing any sort of skin conditions or bug bites. Lavender is also considered the "Mother Love" essential oil making it a great choice to diffuse when welcoming a new puppy into the home.

Lemon (*Citrus limon*) - cold pressed - Seems to be good for some infections, may be antiseptic. Support for depression, anxiety.

Myrrh (*Commiphora myrrha*) Can use this on chapped, cracked paws, skin rashes, hot spots, minor wounds, ear and teeth care, fleas and ticks seem to dislike the odor. Is a main ingredient in our own aromatherapy sprays.

Marjoram, (*Origanum Marjorana*) May help ease your dog's nerves before car rides, vet trips, during thunder storms etc. Another main oil in the raindrop technique. A great arthritis support.

Melaleuca alternifolia Great for canine skin care, bug bites, cuts, wounds and may help fungal infections.

Myrtle (*Myrtus communis*) Another the oils we use in our aromatherapy sprays for dogs. It can assist with bruising, respiratory issues, skin issues, prostate problems, thyroid problems, and muscle spasms.

Nutmeg (*Myristica fragrans*) A delightful and natural spicy scent for canine coat. May stimulate dogs. Another great support for arthritis, also anti-parasitic.

Orange (*Citrus sinensis*) A delightful source for natural citrus scent! Can be calming and good for canine eczema. Uplifting. It's great to diffuse with cinnamon bark or Thieves blend for a nice and healing holiday smell!

Patchouly (*Pogostemon cablin*) Can be used it on cracked and cut paws, canine dermatitis and eczema, all fur care and as an insect repellent. A major ingredient in Animal Scents Ointment.

Peppermint (*Mentha piperita*) May repel insects and fleas, also seems to have a cooling effect on itchy canine skin. Good for bad dog breath as well but raw meaty bones are your best bet for that particular problem. Another great one to support arthritis and found in the raindrop technique, plus assists in digestive and parasite problems.

Ravensara (*Ravensara aromatica*) Eucalyptus like scent, may help skin rashes. Great support for the respiratory system.

Rose (*Rosa damascena*) (highest frequency of the oils - 320mHz) Makes dog coat smell great! Seems to help dogs with sensitive skin and coat, may help canine eczema and calming dogs. Great for ear cleaning as well. A very highly prized oil!

Rosemary (*Rosmarinus officinalis* CT 1,8 cineol) Can be good for healing of wounds and improves dull-looking coat. Generally used for dandruff and seborrhea. Often used as a flea/tick deterrent and is also an ingredient in our aromatherapy sprays. Clarity.

Rosewood (NA) (*Aniba rosaeodora*) Wonderful for skin issues, and is also empowering and emotionally stabilizing. It assists in fungal issues in the skin and can also improve the skin's elasticity.

Sandalwood (*Santalum album*) What a wonderful oil! It is in our skin soothing aromatherapy spray as it is so good for the skin. It can help with sleep issues and is found in a variety of the Young Living blends, especially those for the emotions/feelings such as Trauma Life (another I like to use with animals), Forgiveness, Acceptance, Gathering, Harmony, White Angelica (another of my favorites for deflecting negative energy) and more!

Spikenard (*Nardostachys jatamansi*) (another ingredient we use in our sprays) Seems to help dogs with nervous tendencies.

Thyme (*Thymus vulgaris* CT thymol) - one of the oils of the Raindrop Kit. Seems to work on canine eczema, and staph infections. Another great deterrent against parasites.

Valerian (*Valeriana officianalis*) Seems to help dogs with nervous tendencies, anxiety.

Vetiver (*Vetivera zizanoides*) -Seems to help dogs with nervous tendencies. Also assists as an anti-inflammatory.

Ylang Ylang (*Cananga odorata*) Great scent! May help balances oil production in all coat types. Makes coat smell real nice. Can also bring your dog's mood up and relax at the same time. It is used in a variety of the Young Living oil blends. My favorite for animals are Joy, Grounding, and Peace & Calming.

Specific Essential Oils to combat Specific Insects

FLEAS, MOSQUITOES, TICKS

Cedarwood, Eucalyptus radiata, Geranium, Idaho Tansy, Juniper, Lavender, Lemon, Lemongrass, Myrrh, Ocotea, Palo Santo, Peppermint, Purification Blend, Rosewood (NA), Sage, Spearmint, Thyme

Other Pests That Bug... ANTS, APHIDS, CHIGGERS

Cedarwood, Hyssop, Lavender, Lemongrass, Peppermint, Sage, Spearmint, Thyme

FLIES, GNATS, LICE

Cedarwood, Lavender, Patchouli, Peppermint, Rosemary, Sage, Spearmint

CALMING:

Clary Sage, Roman Chamomile

Blends: Peace & Calming, Grounding, Joy

DIGESTION:

Cardamom, Coriander, Ginger

Blends: Di-Gize

Enzymes: Essentialzyme

JOINT & MUSCLE PROBLEMS:

Black Pepper, Peppermint, Juniper

Blends: Panaway, Relieve It

PARASITES

Di-Gize (also helps upset tummies and diarrhea), Parafree

RESPIRATORY:

Eucalyptus radiata

Blends: R.C.

SKIN WOES: Hotspots, Mange, etc:

Frankincense, Grapefruit, Helichyrsum, Lavender, Myrrh, Rosewood (NA)

WOUNDS:

Animal Scents Ointment

To clean them out: Purification, Lavender, Melrose

STOP BLEEDING & PAIN:

Helichyrsum, Tsuga (Hemlock) , Idaho Tansy, Cistus-(also helps prevent hematomas) Roman Chamomile -pain

TISSUE REGENERATION:

Thieves, Idaho balsam, Geranium, Patchouly

Hi Shmuel, Beth uses a lot of YL products on Animals - this is what she said- this should would for most issues because as with people- we are giving the things needed for the body to heal itself!!

Just spoke to Beth-- they are using the YL products on their dog, a big lab, 60 lbs., for 2 YEARS NOW.. SHE PUT 5 DROPS FRANKINCENSE AND 1 OZ OF NINGXIA RED IN HER FOOD EVERYTIME SHE EATS.. ALSO CRUSHES UP 1 JUVATONE, OPENS 1 OMEGAG-IZE3 capsule & OPENS 1 MULTI GREEN CAPSULE IN THE FOOD. The vet had told them to take her home to die- wouldn't even do tests, she is frisky & younger than ever and her blood tests are normal!! How is that!!

You can also do a RD on a dog- just be careful with the hot oils- maybe dilute those so you don't burn the skin.

Peace & Joy, Lucey

November 1997 D. Gary Young, N.D.
President Young Living Essential Oils

Animals, Aromatherapy and Essential Oils

"I have raised animals all my life and presently have several miniature horses as well as four teams of draft horses. I also have pygmy goats, Barbadoes sheep and llamas at my ranch where I reside. On my 1300 acre herb farm at Whispering Springs in Mona, Utah, I have an animal petting zoo with Bactrian camels, zeeboos from Africa (miniature Bramas), Watusi cows and bulls, Walleroos (miniature kangaroos) , llamas, buffalo, miniature donkeys, as well as horses and goats. As you can see, we have a wide variety of animals.

We have used the oils extensively on many of the animals and are continually making discoveries. The animals respond extremely well and we feel they have benefited greatly.

In my experience, I have found that animals respond to essential oils much the same as humans. Animals are not as sensitive to the phenol and sesquiterpene constituents so they can be applied "neet" or full strength. One needs only to determine which oils are applicable to the situation and then apply a few drops 3-4 times daily.

The amount for small animals like cats and dogs is like the application for a child: 3-4 drops each time applied. For larger animals like large dogs apply 6-7 drops. For horses, apply 15-20 drops.

After applying the oils, I have found it beneficial to cover the open wound with Gentle Care Rose Ointment, which keeps the skin soft and helps promote the healing.

I have applied the oils in the following ways:

1. Apply on their paws where the absorption is very fast.
2. On cloven hoof animals apply on the auricular points of the ears and/or spine or both.
3. Underneath the top lip on the gums and on the tongue.
4. Sprinkle a few drops on the spine and then massage into skin, just like with humans.

For various problems I have experimented with the following oils:

1. Strangle in horses, I used a combination of the oil blends Exodus 11 and Melrose together. (4 parts Exodus 11 to 1 part Melrose)
2. Ear mites in cats and dogs - Purification and peppermint.
3. Ticks, fleas and flies - Tansy and tansy floral water.
4. Tumors (all animals) - Frankincense and lavender mixed together, frankincense and clove mixed together.
5. Worms/ parasites (all animals) - Paraway, and Di-Tone.
6. Open wound (all animals) - Melrose, helichrysum and Gentle Care Rose Ointment.
7. Trauma (all animals) - Trauma Life, Valor, Peace & Calming, Melissa, rosewood, lavender, valerian, and chamomile.
8. Bones (all animals) - PainAway, birch, lemongrass, and spruce.
9. Nervous anxiety with horses - Valor, TraumaLife, geranium, lavender, and valerian.
10. Saddle sores - Melrose and Gentle Care Rose Ointment.
11. Mineral deficiencies - Mineral Essence (liquid tincture taken internally) may help meet the animal's needs and when met, they quit chewing on the furniture and other undesirable things.
12. Tissue repair and healing directly on wound - Melrose.
13. May help with pain and stop bleeding - Helichrysum.
14. Healing of wounds and abrasions - Gentle Care Rose Ointment."

November 1997 D. Gary Young, N.D.
President Young Living Essential Oils
Great Pet info using the oils in the YL Essential 7
Peace & Joy, Lucey Harley

If you already got your these oils - here are some Great uses!!

Discover nature's way of helping you AND your pet!!

The Essential 7 kit - Perfect for use with pets and people!! A variety of single and blended essential oils for daily use. Conveniently packaged for those on-the-go. The Essential 7 kit was created so that anyone could immediately use and appreciate the benefits of therapeutic-grade

essential oils. These oils may be used as dietary supplements, diffused, added to bath water, applied on location, spritzed on your pet, or used with body massage. Refer to the individual oils for specific benefits and instructions.

The kit contains three single oils: Lavender (*Lavandula Augustifolia*), Lemon (*Citrus limon*), Peppermint (*Mentha piperita*), and 4 blends: Purification, Joy, Peace & Calming, and PanAway.

Lavender is the most versatile of all essential oils and has been highly regarded as soothing to the skin. The French scientist René Gattefossé was the first to discover these properties when he severely burned his arm in a laboratory accident. It can be used to cleanse cuts, bruises, scrapes, and skin irritations, including hot spots. Lavender has also been studied for its relaxing effects, both physically and emotionally.

Lemon helps support the immune system, according to Jean Valnet, M.D. It can serve as an insect or flea repellent and may be beneficial for the skin. Add a few drops to distilled water and spritz on your pet for a refreshing lift after an active day. You can add lemongrass or rosemary to the water.

Peppermint is soothing to the digestive system. Jean Valnet, M.D. studied peppermint's ability to affect the liver and respiration. Scientists have also researched peppermint's role in affecting impaired taste and smell and mental accuracy when inhaled. Useful for digestive upset and to enhance your pet's appetite.

Joy is an exotic blend of lemon (*Citrus limon*), ylang ylang (*Cananga odorata*), bergamot (*Citrus bergamia*), mandarin (*Citrus reticulata*), rose (*Rosa damascena*), geranium (*Pelargonium graveolens*), jasimine (*Jasminum officinale*), palmarosa (*Cymbopogon martinii*), rosewood (*Aniba rosaeodora*), and Roman chamomile (*Chamaemelum nobile*) that produces an uplifting magnetic energy bringing joy to the heart. When diffused, it can be refreshing and uplifting.

PanAway was created by Gary Young as a result of an injury in which he severely tore the ligament in his leg. This blend contains wintergreen (*Gaultheria procumbens*), which has an active principle similar to cortisone; clove (*Syzygium aromaticum*), which contains eugenol, a constituent used by dentists to numb gums; peppermint (*Mentha piperita*), calming for nerves; and helichrysum (*Helichrysum italicum*), soothing to localized discomfort.

Peace & Calming is a gentle, fragrant blend especially designed for diffusing. Its components [orange (*Citrus sinensis*), tangerine (*Citrus nobilis*), ylang ylang (*Cananga odorata*), patchouli (*Pogostemon cablin*), and blue tansy (*Tanacetum annuum*), tangerine (*Citrus reticulata*),] promote relaxation and a deep sense of peace. When massaged on the pads of your pet's feet, it can be a wonderful prelude to a peaceful night's rest. Peace & Calming may be especially calming and comforting to your pet during an overactive, stressful day.

Purification is a blend of purifying essential oils, such as citronella (*Cymbopogon nardus*), myrtle (*Myrtus communis*), lavandin (*lavandula x hybrida*), lemongrass (*Cymbopogon flexuosus*), and melaleuca (*Melaleuca alternifolia*). When diffused, it can neutralize mildew, disagreeable

pet odors and help cleanse the air. When applied directly to the skin, Purification can be excellent for soothing insect, flea or tick bites and for cleansing cuts and scrapes.

Founded by Gary Young in 1993, Young Living Essential Oils is world renowned for exceptionally high-quality essential oils, dietary supplements, personal care products, and other unique products for healthy lifestyles.

Young Living's Mission:

At Young Living Essential Oils, we are committed to uniting ancient traditions and modern science to promote health and longevity. Through extensive research and commitment to quality, we are dedicated to growing, distilling, manufacturing, and marketing the highest-quality organic essential oils and oil-enhanced products in the world.

Read what others have said:

"I noticed we have not had a flea problem since we have been diffusing Purification on a regular basis. We used to have to put that stuff we got from the vet on behind the dogs neck every year. We have not done that in 2 years. This was just a by product of our quest for better family health." - David Langdon

"I discovered over the holiday weekend that Peace and Calming also works wonders for dogs that get frightened by fireworks. I have a dog that just freaks out. She normally cannot be consoled or controlled, she literally will claw the skin right off of whoever is trying to hold her. Well, doused her with Peace and Calming on the pads of her paws and inside her earflap, and down the middle of her muzzle, she slept like a baby and didn't show the least concern. This is truly a blessing for an animal, and much better than trying to tranquilize them. I applaud the groomers, vets, and kennels that are thoughtful enough to use Peace and Calming. Wouldn't it be wonderful if more of the pet owners used Peace and Calming? Peace and Blessings," - Nancy

"My husband Blaine and his best friend Toby Robertson went on a camping trip and they traveled a great distant on horses for a week and by the time they were about home one day away our dog Happy could hardly walk because her feet were so sore. So Blaine applied lavender to her feet that night and the next morning she was like she was on day 1 when they started." Nancy Sanderson.

"Bought a couch at a yard sale and put it by a big window and when I came home the house smelled like cat urine. I called Nancy Sanderson and she suggest that I use Purification in a spray bottle on the couch. Now it is like a new couch without the odor." Patsy

"I applied 2 drops lemon in my hands and rubbed them together and pet my cat and the flea took off for other places. Also I put around 30 drops of peppermint in water and spritz my horses to keep the mosquitoes off." Nancy Sanderson

"PanAway was applied to a leg of a horse that got kicked and it took his pain away and he walked away without a limp." Nancy Sanderson

"Joy can be added to the Pet Shampoo to make your pet smell great."

From the YL official site -- Natural Pet Care with Essential Oils

The therapeutic benefits of essential oils are meant for every member of the family, including pets. Whether your best friend is in need of a bath, a mood boost, or suffering from minor skin irritation, Young Living has a pet-friendly solution.

Young Living's Most Popular Products for Pets

AnimalScents™ Shampoo- #5167: Cleans, conditions, and protects your pet's coat without harmful ingredients.

AnimalScents™ Ointment- #5165: A protective and soothing salve formulated for external use on animals.

Did You Know: Essential Oils Pet Care Kit

Veterinarian Dr. Mary Hess of Madison, Wisconsin, recommends that every pet owner carry an essential oil care kit for pets. Based on her experience as a veterinarian, Dr. Hess suggests these Young Living essential oil blends to keep pets feeling their best.

Peace & Calming® essential oil blend: Ideal for stress, fear, anxiety, and similar conditions, Peace & Calming blend can help calm your pet. If the pet is injured, Peace & Calming blend can relax the animal enough to administer other treatments. It can also be used on cats that are resistant to other forms of treatment for urinary problems or that excessively groom themselves.

Purification® essential oil blend: Useful for external parasites, such as fleas, ticks, and mosquitoes.

Thieves® essential oil blend: Perfect for minor wounds, abrasions, and lacerations, Thieves blend can also be used for dental concerns. It is safe for kittens and puppies.

Melrose™ essential oil blend: Used in conjunction with R.C. and Raven blends, Melrose blend provides respiratory support and can also be used on minor wounds, abrasions, and lacerations if Thieves blend can't be tolerated.

R.C.™ essential oil blend: Ideal for respiratory and urinary tract support, R.C blend is practical for cats that require bladder fortification, when conventional therapies fail. (It can be paired with Raven blend for added support.)

Raven™ essential oil blend: Used for respiratory and urinary tract support, Raven blend is more powerful than R.C. blend and features essential oils not found in the latter. Combined, the two oils are highly effective.

Di-Gize™ essential oil blend: Gastrointestinal systems respond well to this blend. Nutmeg and ginger can be added for additional support.

PanAway® essential oil blend: Valuable for relieving discomfort and relaxing the muscles, ligaments, and tendons. This oil blend can be used alone or in addition to other essential oils that aid in general discomfort. Using a moist towel over the area increases the effectiveness of the oils.

Relieve It™ essential oil blend: Especially beneficial for relieving discomfort, Relieve It blend can be alternated with PanAway blend.

Young Living Essential Oils Featured on NBC's Today Show July 12, 2008

Lehi, Utah—On the July 11 episode of NBC's Today show, Dr. Susan Wagner, an animal neurologist, along with animal behaviorist Dr. Terry Curtis promoted the use of Young Living essential oils.

During the Today's Pets segment, Dr. Wagner addressed the fear issues of several dogs including Bailey, a Labrador mix, who is afraid of water. Dr. Wagner suggested the use of lavender essential oil as a treatment option for Bailey's phobia, and explained that, "When we talk about essential oils, we're not talking about fragrances that you buy at a bath and beauty store—these are therapeutic—grade essential oils, and lavender is one of the most calming plants. So we can take a couple drops of oil and put it on a piece of clothing next to Bailey or even one drop and rub it between the hands and rub it down the back and it has an amazing calming effect.

When Today host Meredith Vieira asked if the lavender essential oil was enough to make Bailey not scared of water any more, Dr. Wagner, author of *Through a Dog's Ear: Using Sound to Improve the Health and Behavior of Your Canine Companion*, replied, "It will definitely help."

For more information regarding pet treatments using German gbo HiTop Electro Therapies for your pet, contact

Using Electro Therapy for pets

Select the HiTop program according to the diagnosis if there is one; otherwise a treatment with SimuFAM i would not worsen the health status of the dog.

A whole body treatment is useful. If it is possible to fix the electrode on the upper legs of the pet. 4 electrodes are sufficient.

Or you take 4 small plastic containers (tubs), place an electrode in each of them, fill them with water and place one leg in each of them. Water in the containers should be 5 to 7 cm deep.

The diodes are laid flat in the plastic containers of water so that the feet of the dog is standing on the diodes. This will provide the best contact. Check if the animal isn't hydrophobic before using the water container; otherwise attach the diodes to the legs.
